Outline

- Introduction
- Motivation
- Problems / Challenges
- Literature Review
- Objectives
- Methodology
- Feasibility
- Gantt Chart
- Tech Stack
- Comparison with Existing Work
- Conclusion

Introduction

- Ghar Sathi is a web application
- Helps users find trusted workers for household tasks
- Services include cleaning, plumbing, caretaking, etc.
- Connects service providers and households on one platform
- An easy access to skilled workers with simple UI

Motivation

- Daily household tasks require skilled help
- Finding reliable workers is often difficult
- People waste time searching through contacts
- Need for a centralized and easy-to-use platform

Problems/Challenges

- Limited availability of skilled workers
- Small pool of choices in local areas
- No proper platform to connect users and workers
- Lack of trust and verified profiles
- Time-consuming process to find workers
- No price transparency

Features

- Easy search for household service providers
- Booking system for quick and convenient hiring
- Verified worker profiles for better trust
- Ratings and reviews to help users choose
- Transparent pricing (clear cost before booking)
- Multiple service categories (cleaning, plumbing, caretaking, etc.)
- User-friendly interface for both users and workers

Literature Review

- Growth of on-demand service platforms has changed how people access household services
- Apps like UrbanClap (Urban Company) and TaskRabbit connect users with skilled workers
- These platforms reduce search time, effort, and uncertainty
- Provide features like:
  - Ratings & reviews
  - Price comparison
  - Easy booking

Literature Review

In Nepal, services are mostly informal and unorganized

People rely on:

- Word-of-mouth
- Limited contacts

Common issues:

- Lack of trust
- Limited options
- Time and cost inefficiency
- Need for a localized, reliable digital platform

Objectives

Main Objective:

- Develop a platform connecting households with service providers

Specific Objectives:

- Identify user problems in hiring services
- Create a centralized system for providers
- Enable:
  - Easy search & comparison
  - Booking system
  - Ratings & reviews
- Improve trust, transparency, and efficiency

Methodology

- Research Approach: Mixed (Qualitative + Quantitative)

Data Collection:

- Surveys (households)
- Interviews (service providers)
- Study of apps like TaskRabbit

Development Process:

- Agile method:

Requirement → Design → Development → Testing → Deployment

Tools:

- Frontend: HTML, CSS, JavaScript
- Backend: PHP
- Database: MySQL

Feasibility

- Built using common tools
- Low development cost
- Daily household needs ensure continuous usage
- No special training required
- Easy service search & booking
- Easy onboarding for workers

Tech stack

Core Tools:

- Frontend (User Interface): HTML, CSS, JavaScript
- Backend (Server-side): Node.js/PHP
- Database: MySQL
- UI/UX design: Figma/ Canva
- Tools: VS Code, XAMPP/WAMP, Github, Postman

Comparison to existing work

- Similar to apps like Dori, Kaarya and TaskRabbit, Ghar Sathi helps people connect with service providers easily in one place
- It includes familiar features like booking, ratings, and reviews, making it simple to use
- However, Ghar Sathi is designed specifically for Nepal
- Difference / Improvement:

  Focused on Nepal's local market
- Addresses issues like:

  Lack of trust → Verified profiles

  Limited options → More accessible worker listings

  Unclear pricing → Better transparency
- Result:

  Reduces time and effort compared to traditional methods (word-of-mouth)
- More suitable and practical for local users.

Conclusion

- Ghar Sathi makes everyday life easier by helping people quickly find trusted workers for household tasks
- Instead of asking around or wasting time, users can simply use one platform to book services
- Features like ratings, reviews, and clear pricing help build trust and confidence
- It also gives service providers a better way to reach more customers
- While similar platforms exist, Ghar Sathi focuses on the real needs of people in Nepal, making it more practical and useful
- Overall, it’s a simple idea with strong potential to grow and improve how household services are managed in Nepal

Thank you!
