10. Conclusion

- Problem: finding reliable workers for household services
- Helps users find trusted workers for household tasks
- Services include cleaning, plumbing, caretaking, etc.
- Connects service providers and households on one platform
- Our main motivation is to make the process of finding household workers easier, faster and reliable.

Main Objective:

- Develop a platform connecting households with service providers

General Objectives:

- make the process faster, convenient, transparent and trustworthy by:
- Easy search & comparison
- Booking system
- Ratings & reviews
- Improve trust, transparency, and efficiency

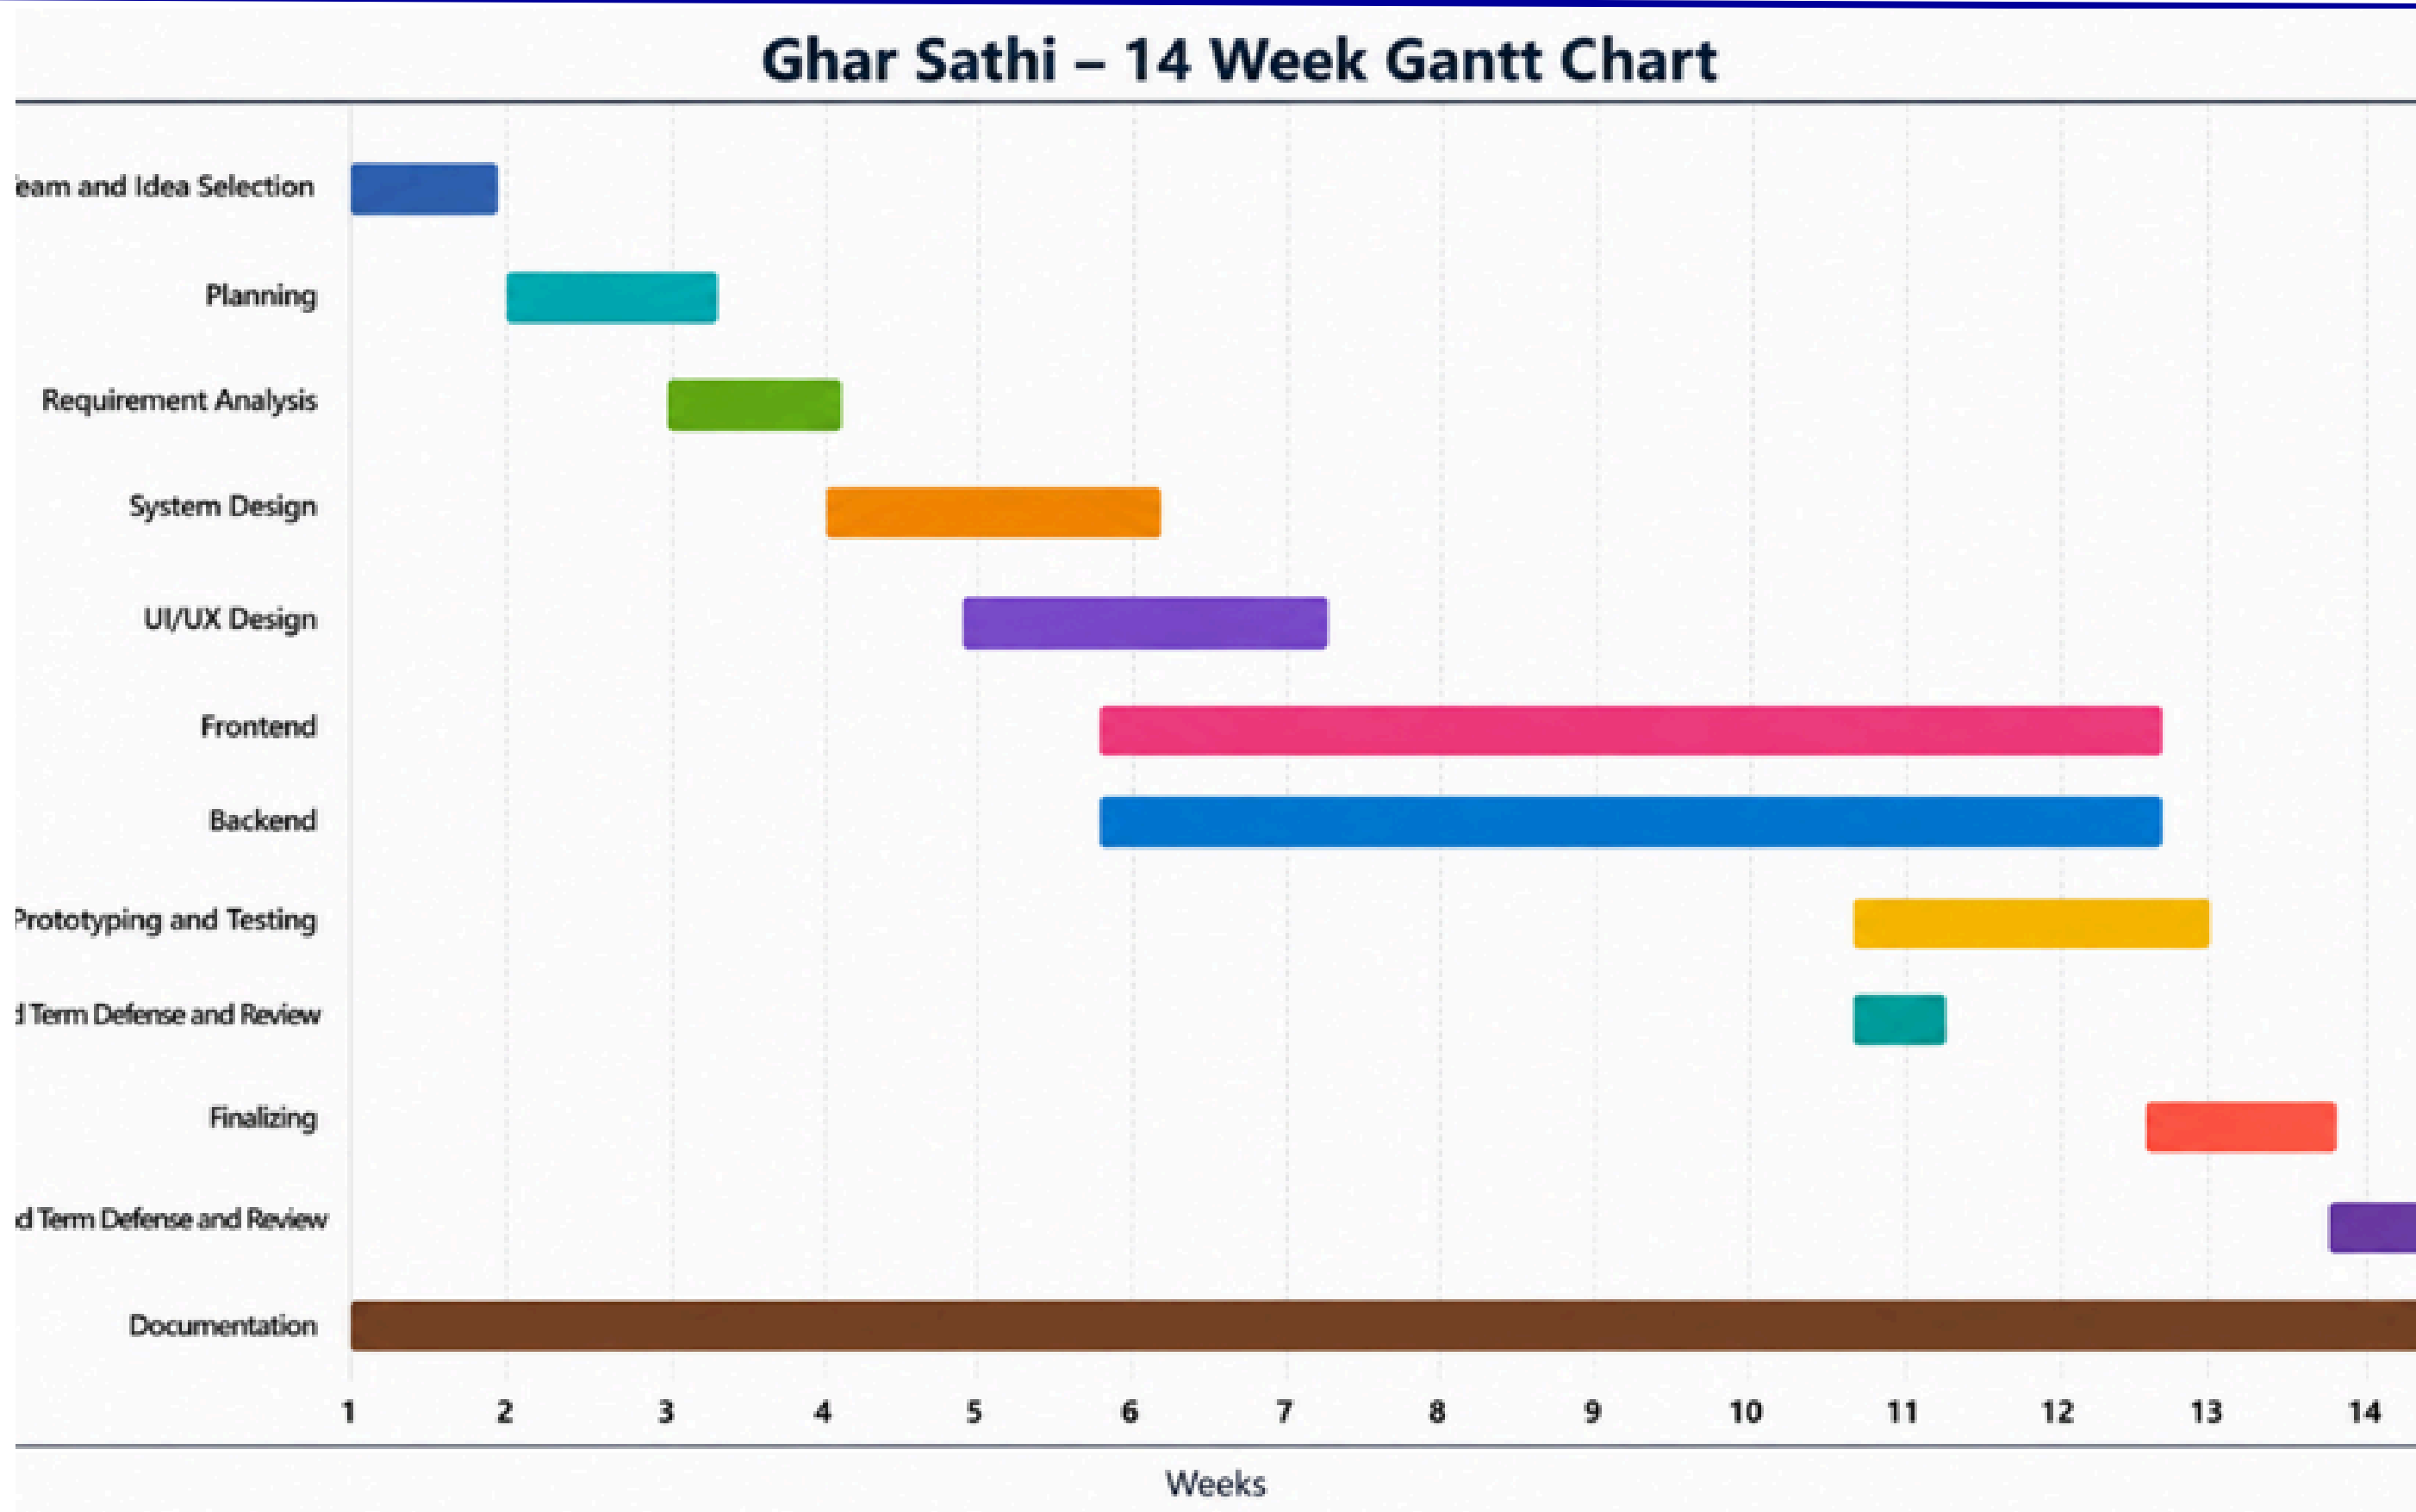

- Technical: PHP, MySQL and JavaScript provide a suitable and manageable technology stack.
- Financial: Uses mostly open-source tools, no keeping development and maintenance costs
- Operational: Simple is designed to be easy for all users: service providers and household
- Schedule: Agile development allowed major modules to be completed within the planned timeline.
- Legal: Includes provider verification and responsible handling of user information.

Tools and Technology Used

- Frontend (User Interface): HTML, CSS, JavaScript
- Backend (Server-side): PHP
- Database: MySQL
- UI/UX design: Figma/ Canva
- Tools: VS Code, XAMPP/WAMP, Github

Gantt Chart

Commitments from End term defense

1. Busy Status for Booked Dates

- Added a “Busy” status to the date picker.
- Dates that are already booked are clearly marked as unavailable.
- Prevents users from selecting an already booked date.

2. Job Page Image Update

- Updated the image displayed on the Job page.
- Replaced the previous image with a new, relevant image.

Overall Status: Completed

Overall Progress Summary

- Project Status: Development Completed
- System Development Completed
- Authentication & Access: Registration, Login and Role-Based Access
- User Management: Employer/User and Service Provider Profiles
- Dashboards: Admin, Employer/User Dashboards
- Service Management: Service Listing, Search and Provider Availability
- Booking System: Service Booking with Date Selection and Busy/Available Status
- Employment Tracking: Available → Request Received → Hired → Working → Completed
- Trust & Safety: Ratings, Reviews and Police Report Approval
- Admin Management: Users, Services, Bookings and System Monitoring
- Database: Complete Database Integration and Data Management

Total Project Duration: 14 weeks

Results Compared to Other Reported Works

Aspect	Existing Platforms	Ghar Sathi
Service & Booking	service matching and booking	employment tracking, provider verification and trust
Provider Management	Basic profiles with resume	Basic profiles with resume and police report
Trust & Safety	Ratings/reviews	Ratings, reviews & police report approval

Key Result: Ghar Sathi integrates the major household service requirements into one centralized platform.

Live Demo

- Ghar Sathi is a platform that makes everyday life easier by helping people quickly find trusted workers for household task.
- It also gives service providers a better way to reach more customers
- Up until now, we have completed the UI design, the frontend and the database part but the backend is yet to be completed.
- Overall, it's a simple idea with strong potential to grow and improve how household services are managed in Nepal.
