Under Supervision of Sanju Shrestha

- Introduction
- Problems / Challenges
- Objectives
- Methodology
- Gantt Chart
- Tech Stack
- Comparison with Existing Work
- Interface Design
- Project Progress
- Present Status
- Conclusion

- Ghar Sathi is a web application
- Helps users find trusted workers for household tasks
- Services include cleaning, plumbing, caretaking, etc.
- Connects service providers and households on one platform
- An easy access to skilled workers with simple UI
- Daily household tasks require skilled help
- Finding reliable workers is often difficult
- People waste time searching through contacts
- Need for a centralized and easy-to-use platform

Problems/Challenges

- Limited availability of skilled workers
- Small pool of choices in local areas
- No proper platform to connect users and workers
- Lack of trust and verified profiles
- Time-consuming process to find workers
- No price transparency

Main Objective:

- Develop a platform connecting households with service providers

Specific Objectives:

- Identify user problems in hiring services
- Create a centralized system for providers
- Enable:
 - Easy search & comparison
 - Booking system
 - Ratings & reviews
- Improve trust, transparency, and efficiency

- Research Approach: Mixed (Qualitative + Quantitative)

Data Collection:

- Surveys (households)
- Interviews (service providers)
- Study of apps like TaskRabbit

Development Process:

- Agile method:

Requirement → Design → Development → Testing → Deployment

Tools:

- Frontend: HTML, CSS, JavaScript
- Backend: PHP
- Database: MySQL

Gantt Chart

Core Tools:

- Frontend (User Interface): HTML, CSS, JavaScript
- Backend (Server-side): PHP
- Database: MySQL
- UI/UX design: Figma/ Canva
- Tools: VS Code, XAMPP/WAMP, Github

Comparison to existing work

- Similar to apps like Dori, Kaarya and TaskRabbit, Ghar Sathi helps people connect with service providers easily in one place
- It includes familiar features like booking, ratings, and reviews, making it simple to use
- However, Ghar Sathi is designed specifically for Nepal
- Difference / Improvement:
 - Focused on Nepal's local market
- Addresses issues like:
 - Lack of trust → Verified profiles
 - Limited options → More accessible worker listings
 - Unclear pricing → Better transparency
- Result:
 - Reduces time and effort compared to traditional methods (word-of-mouth)
- More suitable and practical for local users.

Interface Design

Database

In Progress

- MySQL schema designed
- Core entities created: User, Provider, Booking, Review, Category
- Connected & integrated with the application

Backend

In Progress

- Booking & status-update endpoints
- Review/rating logic finalization
- Admin dashboard APIs
- Notification triggers

Testing So Far

Unit Tests **8/8 Pass**

System Tests **10/10 Pass**

Coverage **Core flows**

Registration, login, search, booking, and review flows have all passed unit and system-level validation.

Where The Build Stands Today:

Design:

- Figma
- UI/UX Design and Wireframing

Frontend

- HTML, CSS, JavaScript, React.js
- Client-Side Interface Development

Backend:

- PHP
- Business Logic and API Development

Database

- MySQL
- Application Data Storage and Management

Development Environment

- VS Code, XAMPP (Apache)
- Local Development and Server Environment

Testing & Version Control

- GitHub
- API Testing and Source Code Management

- Ghar Sathi makes everyday life easier by helping people quickly find trusted workers for household tasks
- Instead of asking around or wasting time, users can simply use one platform to book services
- It also gives service providers a better way to reach more customers
- While similar platforms exist, Ghar Sathi focuses on the real needs of people in Nepal, making it more practical and useful
- Up until now, we have completed the UI design, the frontend and the database part but the backend is yet to be completed.
- Overall, it's a simple idea with strong potential to grow and improve how household services are managed in Nepal.

Thank you!
